[redacted]  
[redacted] has brought to our attention [redacted]  
who produces low cost sounding rockets and vertical probes. (See  
attached brochure) This appears to be a company with a fine re-  
cord of producing high altitude payload systems at extremely  
economical costs. I bring this to your attention in the context  
of rocket photography and its possible applications to geodasy  
and intelligence on the economy plan. Mr. Bissell may be interested.
